More time for expert work

ROI Executive Brief · Simplified calculator v5 · October 24, 2026

Estimate the time your team could recover and compare its value with your subscription. This is an illustrative capacity model, not measured Qevatrix performance.

Three inputs. One clear estimate.

Choose applications and plans. Enter people, admin hours per person per week and loaded hourly cost; choose a 15%, 25% or 35% illustrative scenario. Detailed workload and growth options stay optional.

The same starting example as the page

QualityOS Professional · 3 people · 12 admin hours/person/week · 46 weeks/year · $53.51/hour · 25% reduction of eligible work.

Result	Annual estimate
Time recovered	274 h
Estimated time value	$14,662
Annual subscription	$23,940
Subscription coverage	61%
Balance after subscription	−$9,278

Estimated time value covers 61% of the subscription. Negative balances are shown honestly. Quick baseline is people × hours × weeks; the illustrative task mix determines the eligible share (66.2% here).

What the figures mean

Recovered time can support existing products, new program administration and quality/regulatory improvements. Each task is counted once; growth allocations reuse the same hours and are not monetized. People retain review, approval and regulated decisions.

Time value is not payroll or guaranteed cash savings. $53.51/hour is the BLS-derived US occupational proxy (May 2024 wage × Dec 2024 compensation/wage ratio); use your actual cost. Task times and 15/25/35% reductions are illustrative. Pricing snapshot: October 24, 2026; quote-only and one-time offers excluded. Setup, migration, training and validation costs excluded.
